

Kody Technologies LLC

Bike Rack Light – Flex Universal

Congratulations on your purchase and thank you for your commitment to road safety for your bikes, friends, family, and those around you. Read and follow this instruction to install your new Bike Rack Light Set.

Disclaimer

Tail, Brake and Turn signal lights are a critical safety feature during the operation of your vehicle. Rack lights increase your vehicle's visibility when the lights are obstructed by a bike rack, or any other device mounted to the rear of the vehicle. Please read and review all information carefully before installation. Install the light per the instructions and verify functionality on a regular basis. If you have any questions or concerns, please contact us at Kody Technologies.

- Always verify cable routing and connection and test light function prior to driving, using the light and relying on it for your safety.
- This light adds four pounds to the load on your bike rack. Check rack manufacturer's manual to verify the total load on the rack does not exceed any limits.
- Rack lights improve your visibility and signal communication on the road. They are not a substitution for driving safely and following all traffic laws.
- Kody assumes no liability for injury to persons, damage to movable or immovable property, loss of profit, or any other loss or damage caused by the improper mounting or use of the carrier, including but not limited to mounting or use in conflict with the assembly instructions, mounting instructions or any other instructions given, in writing or verbally, by Kody.

Kody Technologies LLC does not assume any responsibility or liability for accidents or injuries resulting during use of this product or misuse of this product.

Bike Rack Light – Flex Universal

Installation Instruction

101-014

The rack light installs at the back of the rack or on a bike using cable ties or Voile Straps.

1. Determine if you want a permanent or temporary mount.
 - a. For a permanent mount use cable ties to attach the light to your rack. There are also screw holes available if you want to bolt the bracket into place (hardware not included).

- b. For temporary mount, load your rack full of bikes or other goods then attach the light using the Voile straps. Slide the strap through two slots then wrap it around a bike frame or rack member and buckle it.

2. If you're attaching the light to a delicate surface install a section of the provided sticky back Neoprene on the bottom of the light. The Neoprene also provides a non-slip surface to improve installation.

3. Route the cable along length of the rack to the vehicle connection and use cable ties to secure the cable to the rack frame. Bike racks have many pivot points. Be sure to route the cable away from and around pivots to keep them from getting pinched.
4. Connect the light to your vehicle's trailer connection and test all light functions (tail, brake, hazard, left and right-hand turn signals).
