

Kody Technologies LLC

Bike Rack Light – Thule XTR Pro

Congratulations on your purchase and thank you for your commitment to road safety for your bikes, friends, family, and those around you. Read and follow this instruction guide to install your new Thule XTR Pro Rack Light.

Disclaimer

Tail, brake and turn signal lights are a critical safety feature during the operation of your vehicle. Rack lights increase your vehicle's visibility when the lights are obstructed by a bike rack, or any other device mounted to the rear of the vehicle. Please read and review all information carefully before installation. Install the light per the instructions and verify functionality on a regular basis. If you have any questions or concerns, please contact us at Kody Technologies.

- Always verify cable routing and connection and test light function prior to driving, using the light and relying on it for your safety.
- This light adds four pounds to the load on your bike rack. Check rack manufacturer's manual to verify the total load on the rack does not exceed any limits.
- Rack lights improve your visibility and signal communication on the road. They are not a substitute for driving safely and following all traffic laws.
- Kody assumes no liability for injury to persons, damage to movable or immovable property, loss of profit, or any other loss or damage caused by the improper mounting or use of the carrier, including but not limited to mounting or use in conflict with the assembly instructions, mounting instructions or any other instructions given, in writing or verbally, by Kody.

Kody Technologies LLC does not assume any responsibility or liability for accidents or injuries resulting during use of this product or misuse of this product.

Kody Technologies LLC
Protect Your Ride

Product Warranty

We've designed an extremely rugged rack light and are proud to provide a 1-year warranty on any failure on the electronics or hardware. If you experience any issues with your light please contact us, return it and we'll ship you a replacement.

Return Policy

If you are not 100% satisfied with the rack light, please contact us to let us know. We offer a 30-day hassle-free return policy. Return the light assembly in like-new condition and we'll ship you a replacement or refund your money. Most importantly we want to understand any issues you experience so we can address them, and we can continuously improve our products.

Installation Instruction

Model #: 130-010

1. The rack light bracket installs between the rear most bike tray and the frame. It uses new longer screws, fits cleanly and does not affect any tray left or right adjustment.
2. For Install after Rack Assembly:
Remove the two rear most screws holding the last tray in place and loosen the front most screws to make space for the bracket.
For Install During Rack Assembly:
Start securing the last tray to the rack by installing the front most screws into the tray.

3. Set the bracket in place between the tray and the frame. Position the light centered on the frame. Adjust bike tray to desired location.

4. Using new longer screws, install the rear most screws then remove and replace two other screws. Tighten all four screws while keeping the light centered on the frame.

5. Route cable along the length of the bike rack and secure with the provided cable ties. Bike racks have many pivot points. Be sure to route the cable away from and around pivots to keep them from getting pinched.

6. Connect the light to your vehicle's power supply and test all light functions (tail, brake, hazard, left and right-hand turn signals).
7. If turn signals do not function correctly on your vehicle, please see the "How to" page on our website for LED Trailer Lights or contact us.
