

Kody Technologies LLC

Bike Rack Light – Hollywood Destination E Bike

Congratulations on your purchase and thank you for your commitment to road safety for your bikes, friends, family, and those around you. Read and follow this instruction guide to install your new Kody Bike Rack Light.

Disclaimer

Tail, Brake and Turn signal lights are a critical safety feature during the operation of your vehicle. Rack lights increase your vehicle's visibility when the lights are obstructed by a bike rack, or any other device mounted to the rear of the vehicle. Please read and review all information carefully before installation. Install the light per the instructions and verify functionality on a regular basis. If you have any questions or concerns, please contact us at Kody Technologies.

- Always verify cable routing and connection and test light function prior to driving, using the light and relying on it for your safety.
- This light adds four pounds to the load on your bike rack. Check rack manufacturer's manual to verify the total load on the rack does not exceed any limits.
- Rack lights improve your visibility and signal communication on the road. They are not a substitute for driving safely and following all traffic laws.
- Kody assumes no liability for injury to persons, damage to movable or immovable property, loss of profit, or any other loss or damage caused by the improper mounting or use of the carrier, including but not limited to mounting or use in conflict with the assembly instructions, mounting instructions or any other instructions given, in writing or verbally, by Kody.

Kody Technologies LLC does not assume any responsibility or liability for accidents or injuries resulting during use of this product or misuse of this product.

Product Warranty

We've designed an extremely rugged rack light and are proud to provide a 1-year warranty on any failure on the electronics or hardware. If you experience any issues with your light please contact us, return it and we'll ship you a replacement.

Return Policy

If you are not 100% satisfied with the rack light, please contact us to let us know. We offer a 30-day hassle-free return policy. Return the light assembly in like-new condition and we'll ship you a replacement or refund your money. Most importantly we want to understand any issues you experience so we can address them, and we can continuously improve our products.

Bike Rack Light – Hollywood Destination E Bike

Installation Instruction

Model#: 101-024

The rack light installs at the back of the rack using existing hardware locations with new longer screws. It fits cleanly and does not affect any tray adjustment or bike loading.

Tools: 6mm Allen Wrench and Ratchet with 13mm socket or 13mm Box End Wrench

1. Remove the plastic nut covers on the bottom of the last bike tray.

Remove
Plastic
Nut
Covers

2. Remove two screws and nuts attaching the last tray to the bike rack.

Remove Hardware

3. The light can mount between the wheel guide and tray (Top) or below the tray at the nuts (Bottom). In the top position the bike clamp frame does interfere slightly with the light when folded in the down position.
4. Place the light on the rack in your preferred position, run the longer provided screws through the rack and light, and install the nuts. Tighten the screws and nuts.

Top or
Bottom
Install

Place Light
and
Tighten
Hardware

5. Route cable along length of rack to vehicle connection and use cable ties to secure the cable to the rack frame. This rack has two large pivot points and those need extra cable slack to allow for proper pivoting. Be sure to route the cable away from and around pivots to keep them from getting pinched.

Routed cable
along rack and
test the light.

6. Connect the light to your vehicle's trailer connection and test all light functions (tail, brake, hazard, left and right-hand turn signals).
7. If turn signals don't function correctly on your vehicle, please see the "How to" page on our website for LED Trailer Lights or contact us.
